Open for business.

- Energy saving insulation qualities.
- Architectural finishes for visual appeal.
- Wide range of standard colours.
- Vision – single panel/rows or full panoramic.
- Full range of track details to suit your application.

Sectional Overhead insulated door

model AROD

General

We have to remember that a door does most of its good work when it's closed. It's keeping out the weather and keeping in the warm air or cooled air that your plant has expensively generated. But some doors are better than others for commercial or industrial buildings, take the sectional overhead door for example. In its manual form it is both quick and simple to use, comes in a wide range of colours as standard and can be supplied with windows so that warehouse staff can see that a vehicle has arrived.

Add an electrical operator and the same door can be interlocked into a sequence using traffic lights to manage vehicle movements safely and efficiently.

Armo sectional overhead doors can be supplied up to 6 metres wide x 6 metres high and special formats are available for individual applications.

Track configurations

When a sectional door opens it can open straight up if the building is high enough, or if not we can provide a range of tracks to take the door up and into the building. The door will always be designed to take the tracks as close as is physically possible to the ceiling to keep the door away from warehouse traffic.

The operator

Armo door operators comply with all current European requirements and are robust and reliable in operation.

You can choose what type of control mode you want, auto up, so the door always clears the opening, and constant pressure close. You can also choose auto up and auto down with a self-monitoring safety bottom edge.

Vision

Vision is achieved in a variety of ways on Armo sectional doors. We have a range of possibilities from spyholes, where security might be an issue, to full glazed panoramic windows. These can be used for not only vision to the outside world but also as a simple means of letting in natural light. And if security is an issue for low level vision, there is absolutely no reason why the panoramic windows cannot be positioned toward the top of the door to let the light in.

The door panel

One of the main advantages of the Armo sectional door is its insulation value: the standard 40mm thick panel has a U value of 0.45 W/m² K. This equates to 0.9 W/m² K for a door nominally 4m x 4m. Armo also installs doors with an 80mm thick panel which is even more thermally efficient for temperature controlled stores.

All Armo products are supplied to the latest European standards as you would expect – the sectional door is no exception, built to BS EN13241 and installed and maintained by our own employed engineers you can rest assured that you have invested in a quality product.

We can supply a wide range of standard colours to match or complement your building aesthetics; however should you require a special colour to match cladding or a corporate image we supply all of the British Standard range of colours as well as all RAL colours. We can colour match most other colours on receipt of a sample.

Armo have been manufacturing high quality loading bay and lifting table solutions since 1972, for further technical or pricing information please contact our head office:
